

A photograph of a modern interior space. The room features large windows covered with white vertical blinds. Sunlight filters through the blinds, creating a pattern of light and shadow on the floor. In the foreground, there is a large, clear glass coffee table. To the right, a potted plant with long, green leaves is visible. The overall atmosphere is bright and airy.

R20

Control by chain and cord

By selecting this control type, the blind will open/close using cord and vanes will tilt by using chain. Chain is a plastic, colour matched chain and it is possible to choose metal (nickel) chain (for additional surcharge). Both chain and cord controls have child safety devices included.

Child safety - chain
RC-GRL-28-SAUG-00

Child safety - cord
LC157

Cord weight
VZV000XX

Chains
RV00063, RC163/RC-GR-M,
RV00112, RV00061

Wand control

Opening, closing and tilting the vanes will be all controlled using the wand. Available with L10 and R10 controls sides only.

Plastic ring	VZV00038
Metal rod	VZV00004
Fixing ring	VZB-SB

Control lengths and installation heights

- Standard control length is $\frac{2}{3}$ of product height.
- When control length does not meet the child safety requirements, then it needs to be reduced to the maximum allowed length according to those requirements (not applicable with wand control).
- When installation height is known, the distance between the floor and the bottom of the controls. needs to be no less than 1.5m.
- When installation height is unknown, but the blind height is less than 2.5m, control length should be no more than 1m.
- When installation height is unknown, but the blind height is more than 2.5m, control length should not be longer than blind height reduced by 1.5m ($\text{blind } h - 1.5\text{m} = \text{control length}$).
